

Now what happens...

As an FYI-what happens if my child is exposed to COVID?

If your child is at risk due to the information gathered from our inhouse contact tracing, you will be called by our COVID Coordinator and nurse, Ms Lynn. The tracing plan is shared with the Health Department immediately. Specific info will be shared and the plan of action shall be provided to you regarding next steps. Any questions you have will be answered and further treatment recommendations will be shared.

Who is making the decisions?

We were required by the Governor to dedicate a COVID Coordinator for our campus; Lynn DeChellis serves as this role. If your child or someone in your family is diagnosed, you are to contact Administration or Ms Lynn and she will begin the notification process. The team includes our Administration, Superintendent, COVID Coordinator, Human Resources, and our Health Dept assigned liaison. Once the treatment plan and quarantine plan is determined, each member has directives they are required to follow.

What is done to keep my child and anyone else in the building safe?

As stated, each person exposed is contacted personally by the COVID Coordinator (or designee). Then, contact is made with our Maintenance Supervisor and a cleaning plan is executed depending upon the area, timeframe of exposure, and staff members/children involved. Typically, this will be done prior to any staff or students entering the building for safety purposes.

What do I tell other community members that ask me about it?

You are welcome to share what you know, that someone was diagnosed and the school has a plan to keep everyone safe. We follow the directives provided by the Ohio Department of Health and our local Health Department. We have developed a plan for information sharing that we believe will appropriately provide safety information to parents and staff but provide the required HIPAA privacy to anyone involved in the situation.

What can I do to keep my child(ren) safe?

To be honest, the best measures are to keep wearing your mask in public and to try and train your child to wear their mask. Whenever possible, stay away from public places and wash your hands or sanitize often. Remember, you or your child may be asymptomatic so if you experience mild signs such as a runny nose, sore throat, or a headache please check your temperature and contact your physician for advice.
